June 11, 1991

REPLY TO ATTENTION OF:

Mr. Glen Lenzi Outboard Marine Corp. 100 Sea Horse Dr. Waukegan, IL 60085-2195

Dear Glen,

This letter is to clarify some general expectations concerning the final data report currently being put together by Canonie summarizing the soil sampling effort completed for the New Slip.

In addition to maps and data tables, all the raw laboratory data will be needed along with the QA/QC review of the data. If the QA/QC is not complete yet, please do not hold up the data summary for it. It can be transmitted at a latter date. Monitoring well construction details and water level measurements should also be included in the summary. General field observations and of identification subsurface features encountered "As-built" drawings are needed, construction would be useful. particularly since a lot more sand covers the site than originally anticipated as a result of the slip extension.

It would also be helpful if Canonie would estimate how much of the sand will be removed from the pile and used during construction.

I'm sure we both have the same interest in having a complete record for this effort since the details will be difficult to track once the construction team has left the site and the information must become part of the Administrative Record for the Coke Plant site. Let me know if we need to discuss this any further.

Sincerely,

Cindy J. Nolan Remedial Project Manager
